Wash hands before breaks and at the end of work.
 Keep away from foodstuffs, beverages and feed.
 Immediately remove all soiled and contaminated clothing.
 Avoid contact with skin and eyes.

Respiratory protection:

Use suitable respiratory protective device only when aerosol or mist is formed.

Protection of hands:

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
 Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.
 Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation.

Protective gloves

Material of gloves

Butyl rubber, BR
 Nitrile rubber, NBR

The selection of the suitable gloves does not only depend on the material but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material cannot be calculated in advance and has therefore to be checked prior to the application.

Penetration time of the material of gloves

Butyl: > 0,7 mm/ 480 min.
 Nitrile: > 0,4 mm/ 480 min.

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
